

Ability Drive™

Drive your wheelchair with your eyes.

Ability Drive™ is a drive control interface that enables you to drive a powered wheelchair with your eyes. Using virtual buttons and eye gaze technology, people who are not able to use a joystick can regain movement independence.

Ability Drive™ hardware

How it works

The Ability Drive™ app runs on a tablet computer equipped with an eye gaze camera or an eye gaze speech generating device. The app senses your gaze on virtual buttons which sends directional movement commands to the Ability Drive™ hardware interface. These buttons are overlaid on forward camera view. Looking at the stop button, looking away from the computer, or closing your eyes stops wheelchair movement.
